

02724 "Big Mag" Magnetic Antenna Base

M Base Antenna Termination

02795 (Optional)

Features

- Heavy Duty Magnetic Base
- Universal Mounting of GPI (Ground plane Independent) antennas
- Silicon Surface Protector will protect vehicle paint work
- Antenna M-Base
- 5m x RG58C/U Terminated with UHF Plug
- Optional 02795 M Base to 5/16" Adapter (Purchased Separately)
- 140mm \varnothing x 30mm (H)
- Weight: 1.16 Kg (Including cable)

This universal Magnetic base provides the benefit of simple short-term installation of an antenna to any Ferrous based metal panel. Ideally a vehicle panel will provide a suitable base for antenna mounting when a temporary installation is required. The base uses magnetic force to secure the antenna to the vehicle. The only way to remove the base is to lift the lip of the silicon protector to allow air to fill the vacuum created.

Soft Silicon Surface protector is used in the base to protect vehicle paint work of this antenna mount. It is important to select a surface with solid structure to ensure the panel will not be affected in any way.

This mount is sufficiently strong to mount even larger heavier antennas due to the strength provided by the base.

Packaging

Individually packed in a cardboard box.
20 pcs packed in a Carton.
Carton Size: 330 x 315 x 330mm
Gross Weight: 25.5 Kgs
